Information Theory of DNA Sequencing - arXiv

Communication is an age-old field and in its early days, communication system designs were ad hoc and tailored for specific sources and specific channels. In 1948, Claude Shannon changed all this by introducing information theory as a unified framework to study communication problems [21]. He made several key contributions.

Introduction

Claude Shannon's 1948 paper "A Mathematical Theory of Communication" gave birth to the twin disciplines of information theory and coding theory. The basic goal is efficient and reliable communication in an uncooperative (and possibly hostile) environment. To be efficient, the transfer of information must not
